

Lightning Arrestor

T-6237

Description:

- * Equipment to protect equipment in machine room from lightning strike.
- * Outdoor loudspeakers and transmission lines are easy to be struck by lightning. The instantaneous high current is cut off and transmitted to the earth, which plays a protective role in the broadcasting equipment of the computer room.

Features:

- * Rack mounted design in 2U height.
- * 4 independent input and output channels, 70~100V, 20A for each.
- * Automatically cut off output when there is lightning to protect amplifier and speaker from damage.
- * Earth line automatically direct the lightning into the ground.
- * Concise LED indicator display for normal/protection status.
- * 1 Group alarm output 0V (short circuit).
- * Over voltage and electric leakage protection.

Specifications:

Model	T-6237
Power Consumption	15W
Dimension	484 x 303 x 88mm
Power Supply	~110V-230V 50/60Hz
Weight	8.04Kg
