

Description

Conference background music application field

The invisible acoustic planar honeycomb structure vibration plate can truly realize the full range of sound diffusion capability of 180 degrees, realizing high definition original sound reproduction. The 360-degree sound creates a high-definition sound field with double coverage area. Regardless of the structure of the room and the listening position, we can be in a stereo sound field.

Living room theater application field

* Using a 180-degree surface sound source to make the sound transmission more flat and balanced. The sound field width is wider, and it is more closely connected to the surround sound of each channel, so as to achieve a stronger sense of presence in small space surrounded by loud field.

Specifications

Model	TS-080Y
Impedance	8Ω
Frequency response	80Hz -20KHz
Rated power	80W
Sensitivity (1W/1M)	92dB
Mounting hole size (mm)	455 * 305
Dimensions (mm)	450 (height) * 300 (width) * 36 (depth)
Weight	1.5 Kg
