Human medical guidance software

TH-32DZR software V2.104

Description

The human medical guidance software allows patients to click on the corresponding parts of the human body on the display screen, select the symptoms of their own diseases, accurately recommend departments, and guide patients to register for medical treatment.

Features

*Supports selection of accompanying symptoms and automatic recommendation of registration departments.

*Supports obtaining hospital logo, hospital name through the background and terminal binding server.

*Supports one-click import of Excel disease library; supports switching between male and female human models, and supports 360° rotation of 3D human body models .

*It supports clicking on the corresponding part of the human body on the display screen, selecting the symptoms of one's own disease, accurately recommending departments, and guiding patients to register for medical treatment.

*When recommending a department, the introduction and scheduling information of the department's expert doctors can be displayed.

*Supports multi-terminal display, mobile terminal or vertical all-in-one machine.

*Supports scheduled power on and off, supports setting automatic power on and off time periods, and supports remote software upgrades.
