

Description

This Bluetooth wireless active ceiling speaker combines excellent acoustic performance with ample power output, and is easy and efficient to install. It is suitable for background music and PA systems in various business hotels, commercial buildings, supermarkets, and leisure and entertainment venues.

Features

- * It adopts a metal acoustic mesh cover, which has low sound transmission loss; both the main and auxiliary enclosures use a plastic basket frame combined with a metal mesh cover structure, and the power amplifier circuit board is integrated on the back of the main enclosure, with a compact and reasonable layout.
- *The inside of the mesh cover is lined with acoustically permeable cotton, which can prevent dust and moisture from entering the cavity protection unit and extend the product's service life.
- *Both the main and auxiliary speakers are equipped with 6-inch full-range speaker units, providing complete frequency band coverage and natural vocal reproduction, making them suitable for speech broadcasting and background music playback.
- *It is powered by an external 18V/3A audio-specific power adapter, supports Bluetooth 5.0 wireless audio transmission, has a stable connection and low latency, and can quickly pair audio devices.

Specification

power	10W (local) + 3*10W (external)
Frequency response (-10dB)	120 Hz-20kHz
Sensitivity (±3dB)	90dB
Opening size	208 mm
speaker unit	4 x 6 inches (1 main, 3 secondary)
Dimensions (Φ×D)	241 × 72 mm
weight	Main container : 0.81 kg; Secondary container : 0.58 kg
